[a] Arsenic analyses were conducted using inductively coupled plasma mass spectrometry (ICP-MS) (<https://www.fda.gov/media/87509/download>). Limits of Quantitation (LOQs) ranged from 0.7 to 103 ppb; Limits of Detection (LODs) ranged from 0.2 to 34.3 ppb. Results less than the LOQ and greater than the LOD are reported in italics. Results less than the LOD are reported as <LOD.

[a] Lead analyses were conducted using inductively coupled plasma mass spectrometry (ICP-MS) (<https://www.fda.gov/media/87509/download>). Limits of Quantitation (LOQs) ranged from 0.2 to 100 ppb. Results below the limit of detection (LOD) are reported as <LOD. Because LODs were not available for each sample, a range is not reported and trace values (those greater than the LOD and less than the LOQ) are not indicated.

Analytical Results for Cadmium in Food Intended for Babies and Young Children Sampled under the FDA's Toxic Elements in Food and Foodware, and Radionuclides in Food – Import and Domestic Compliance Program (FY2009-FY2021).

The data in this table represent 405 samples of food from FY2009 to FY2021 that were analyzed for cadmium by the FDA as part of the FDA's Toxic Elements in Food and Foodware, and Radionuclides in Food compliance program.

The data in this table represent 405 samples of food from FY2009 to FY2021 that were analyzed for cadmium by the FDA as part of the FDA's Toxic Elements in Food and Foodware, and Radionuclides in Food compliance program.

FDA Sample ID	Fiscal Year	Baby Food Name	Baby Food Category	Cd Concentration (ppb) ^[a]
---------------	-------------	----------------	--------------------	---------------------------------------

[a] Cadmium analyses were conducted using inductively coupled plasma mass spectrometry (ICP-MS) (<https://www.fda.gov/media/87509/download>). Limits of Quantitation (LOQs) ranged from 0.1 to 63 ppb; Limits of Detection (LODs) ranged from 0.03 to 21 ppb. Results less than the LOQ and greater than the LOD are reported in italics. Results less than the LOD are reported as <LOD.

Analytical Results for Mercury in Food Intended for Babies and Young Children Sampled under the FDA's Toxic Elements in Food and Foodware, and Radionuclides in Food – Import and Domestic Compliance Program (FY2009-FY2021).

The data in this table represent 87 samples of food from FY2009 to FY2021 that were analyzed for mercury by the FDA as part of the FDA's Toxic Elements in Food and Foodware, and Radionuclides in Food compliance program.

[a] For the majority of samples, mercury analyses were conducted using inductively coupled plasma mass spectrometry (ICP-MS) (<https://www.fda.gov/media/87509/download>). Limits of Quantitation (LOQs) ranged from 0.8 to 38.4 ppb; Limits of Detection (LODs) ranged from 0.1 to 12.8 ppb. Results less than the LOQ and greater than the LOD are reported in italics. Results less than the LOD are reported as <LOD.

[b] For these samples, mercury analyses were conducted using X-Ray fluorescence. The LOQ was 5 ppm. Results less than the LOQ are reported as not-detected (ND).
